

# Chemical Monitoring Services

Many employees on campus work with potentially hazardous chemicals. A common hazard associated with some chemicals is the potential for internal exposure, caused by inhaling the chemical's vapors or fumes.

## Do you know if you are being over-exposed to the chemicals you work with?

If not, Environmental Health and Safety can provide chemical exposure monitoring services for Ohio State colleges or departments that are subject to OSHA requirements and/or professional accreditation requirements. EHS can monitor for:

**ACETONE**

**FORMALDEHYDE**

**ISOFLURANE**

**SILICA (AIRBORNE DUST)**

**VOLATILE ORGANIC COMPOUNDS**

*and many more!*

Contact EHS to schedule chemical monitoring services!
