

Prevent Mosquito-borne Diseases

Fight the Bite! Drain. Avoid. Spray.

Eliminate breeding sites around the farm!

Store buckets, feed pans & anything that can hold water for more than a few days

Refill watering tanks weekly, keep algae-free, and replace mosquito dunks monthly

Check for water collecting in tractor seats and other equipment stored outside

Drain water every week from wagons and truck beds

Prevent old tires and tarps from collecting water

Fill in driveway and barnyard puddles, and where rain drips from eaves

Keep pond shores mowed and free of vegetation

Clean up debris and trash

Turn over any unused watering or feed troughs

Drain all grain unloading pits

Protect Yourself from Biting Mosquitoes

- Wear long, loose and light-colored clothing
- Use insect repellent with DEET, Picardin or lemon-eucalyptus oil
